Profile

As a qualitative mixed-methods UX researcher, I worked with some of the biggest names in the tech industry. I specialized in testing generative AI and personas, digital assistants, and search tools to deliver insights driving product decisions and future research.

For over 15 years, I have been teaching science communication to graduate students at the Illinois Institute of Technology (IIT). This grew out of my interest in technical communication and my work sharing the efforts of the faculty of the College of Science at IIT in both print and online mediums.

My diverse background in design, communication, web development, analysis, and teaching has prepared me to tackle complex challenges through research, data gathering, and evaluation.

Experience
